

Your investment choices

Your investment choices

This guide aims to help you make an informed decision about investing in the funds made available through your membership of the UBS (UK) Group Pension Plan – CS Section, by:

- 1 Introducing the **INVESTMENT BASICS** you need to know, including types of investment, and investment risk on **PAGE 4**
- 2 Looking at the **INVESTMENT CHOICES** you have in the Plan, including the default option, the alternative options and their charges on **PAGE 8**
- 3 Demonstrating **PLANVIEWER**, Fidelity's online account management service on **PAGE 24**
- 4 Listing the **CONTACT DETAILS** for the Plan on **PAGE 25**.

Something to note...

The most important point to keep in mind when you make an investment is that its value can go down as well as up, so you may get back less than you invest. Neither Fidelity, the company nor the Trustee can provide investment advice so if you require this, please contact a financial adviser.

This guide along with the fund factsheets available on PlanViewer gives you all the information you need to know about investing with Fidelity. This includes details of objectives, risks, and charges associated with each fund.

You should read this guide – along with the Members' guide to DC Plus – to find out what the UBS (UK) Group Pension Plan – CS Section has to offer.

This guide is available in different formats. Please contact Fidelity for more information.

Asset classes

Broadly speaking, there are five main different types of assets that you can invest your pension account in. Let's start with the four assets and take a look at their drawbacks and benefits, then we can get into the investment options.

Quick read...

There are four main asset classes to consider:

- Cash funds
- Bond funds
- Equity funds
- Property funds

Each of these asset classes has their own characteristics. If they were to be grouped on a chart from lowest to highest risk, cash would be considered to have the least risk, followed by bonds, commodities, property and finally equities on the higher risk side.

Your Plan may offer all asset classes or a selection of asset classes to choose from.

The underlying funds in your Plan invest in one or more of these asset classes. Each fund is rated according to Fidelity's risk ratings – from L1 (lower risk/return) such as a cash fund to H (Higher risk/return) such as an equity fund.

Cash funds

Most of us are familiar with cash. We know it in its physical form and keep it in our bank accounts. But what does it mean when you pension is investing in cash and money market instruments? Cash and money market instruments are lower risk investments aimed at investment returns similar to bank/building society interest rates. Although these are the least risky of the asset types, cash can still fall in value over the long term due to the effects of inflation and charges/fees if exposure is obtained through funds or other products. If this happens, it might look like the amount in your account is rising in value but what you can actually buy with it will be less (this is known as the value falling in 'real terms'). Cash funds also have fees that may reduce the level of interest you receive.

Bond funds

A bond is a loan to a company or government, and it pays a fixed rate of interest. The value fluctuates in line with the market and how likely it is the loan will be repaid. Bond funds normally sit somewhere between cash and equity funds, as they offer the potential for more growth than cash with more risk – and less growth than equities with less risk. However, this does not mean they have no risk. The level of this risk can be higher in volatile markets, during periods of unpredictable and sometimes sharp price and interest rate movements, which means that the value of your investments can fall in value dramatically during those periods.

Equity funds

An equity (also known as a company share) represents part-ownership of a company. While you cannot invest directly in shares through your workplace pension, you can put money in funds that hold the shares of many different companies. The investment return of an equity fund depends on the performance of the companies it has invested in and how keen investors are to buy these shares. Some companies may also pay out part of their profits in the form of dividends. Equity funds tend to offer more growth potential over the long term than many other asset classes, particularly bonds and cash. However, they also tend to involve more risk and their value can go down as well as up, particularly in the short term.

Property funds

In investment terms, property tends to mean commercial buildings, such as offices, factories, warehouses and retail spaces. Property funds benefit when prices rise (though it's important to remember properties can fall in value as well) and the funds should receive rent from their tenants. Their biggest drawback is that properties can be much harder to buy and sell than most other types of investments (to use the technical term, they are 'illiquid'). This can create challenges if you need to take your money out of a property fund when the market is going through a difficult period.

The risk of your underlying funds

The underlying funds in your pension plan invest in one or more of these asset classes. Each fund is rated according to Fidelity's risk ratings - from L1 (lower risk/return) such as a cash fund to H (Higher risk/return) such as an equity fund.

What are the risks of investing?

It's natural enough to think of risk as a bad thing. But it doesn't have to be: starting a new job or moving house are things that can pose risk, but can turn out extremely well. The same can be said of investments. Investment reward comes from growth, for example rising prices of company shares, and from income, say dividends or rent paid. These rewards will tend to be higher where there is more risk, in other words, where the prices can change more radically for better or for worse. Even if returns are good over the long term there may be times when your investments suffer ups and downs in the short term. While the ups are good, the downs could be at a time that is inappropriate for your personal circumstances, so this is a risk.

How can I avoid investment risk?

Unfortunately when it comes to investing it can mean relying on the performance of your investments and therefore it's impossible to avoid risk completely. However there are things you can do to minimise the level of risk that you're exposed to.

Through diversification you can reduce exposure to investment risk. Diversification is about investing in things that respond differently to each other. Different asset classes will be affected differently by news and trends. For example, different regions of the world will have varying economic opportunities, weather and political events that can and do affect market prices. Geographical diversity can affect risk, such as the difference between investing in developed versus more emerging markets. Picking more than one fund, or picking a fund that invests in a range of assets, will increase diversity, allowing you to spread risk more evenly.

Time is very important when making decisions regarding risk versus reward. The longer your time frame, the more risk you might be willing to take in order to maximise the growth of your account.

The shorter the period you have to invest, the more you will look towards low risk funds as you begin to protect your account from any sharp falls in value before you retire. It may not be such a good idea to take on a high risk investment days before you are about to retire. Conversely, if you're not looking to retire for another twenty years, you might accept more risk in return for the opportunity of greater reward. Personality enters into this as well. It's no good picking funds that keep you up at night.

How do I choose funds?

Different types of funds with their differing characteristics may seem daunting at first and you may think that making an investment decision has to involve some specialist knowledge. But there is a way to invest without having to research single equities or properties, or have specialist knowledge.

A fund is a pool of lots of investors' money, run by a portfolio manager who invests on your behalf. Funds offer you easy access to different assets, such as bonds or equities. Investing in a fund involves you in very little administration. You can review your account and check its value any time online with PlanViewer, Fidelity's online account management service. Information on PlanViewer can be found "Introducing PlanViewer" on page 24 of this guide. There are no switching fees if you decide to change funds.

Portfolio managers are expert professionals whose job it is to make decisions based on their knowledge and the latest research. Funds also spread the risk by investing across a large number of companies in different asset classes and geographies, even if your investment in them is small. Funds come in many different forms for different purposes, and you may want to look very carefully to find one that suits you.

For example, a UK equity fund aims to grow your investment by investing in shares of around 100 UK companies. It would be an enormous amount of work to try and manage this process yourself. By investing in this fund, Fidelity or Fidelity's fund partners take care of this for you. You have a choice of 19 funds in this Plan.

Your Plan's investment choices

The first choice you'll make will be whether to remain in the Plan's default option, the CS Drawdown Lifestyle Strategy, choose an alternative lifestyle strategy or self-select your own funds.

Quick Read...

- On joining the Plan, you will be invested in the CS Drawdown Lifestyle Strategy
- A Lifestyle Strategy is an automated process that switches your investments into medium to low-risk funds as you move closer to the date you have indicated you want to take your savings.
- The Lifestyle Strategies start off in the growth phase and end up in the protection phase.
- You do not need to do anything in a Lifestyle Strategy as it is all managed for you.
- It's important to ensure you regularly monitor your investments to ensure they are in line with your savings goals.

The Lifestyle Strategies

If you still don't feel comfortable making choices about specific investment funds, you don't need to worry. On joining the Plan, your account will automatically be invested in the CS Drawdown Lifestyle Strategy, which is the default option for the Plan. In the CS Drawdown Lifestyle Strategy, all investment decisions are made for you. Your savings will be switched into different funds automatically as you get closer to retirement. All you need to do is let Fidelity know the age you intend to retire so the CS Drawdown Lifestyle Strategy can be applied correctly. You can use PlanViewer to change your retirement age if you want to, otherwise Fidelity will assume a target retirement age of 60.

How does it work?

A Lifestyle Strategy is an automated investment process that moves your account between different types of funds during your working life. When you are a number of years away from retirement, your account will be invested in one or more funds mostly investing in equities. This is the growth phase of investing, when you will have a greater exposure to the stock market and the potential investment growth this offers. There are normally more ups and downs in investment returns during this period. Over time, the amount invested in funds investing in equities will decrease. Typically by the time you near retirement, your account will be invested in a way that protects its value by reducing your exposure to the ups and downs of the stock market. This is the de-risking or protection phase. In addition, a lifestyle strategy is designed to access a certain form of benefit in retirement. The CS Drawdown Lifestyle Strategy is designed to target drawdown.

What are the advantages and disadvantages of a Lifestyle Strategy?

Below we have summarised the main advantages and disadvantages to help you to decide whether or not a Lifestyle Strategy might be a suitable choice for you.

The ADVANTAGES

- You do not need to actively manage your pension account.
- A Lifestyle Strategy aims to preserve the value of your pension savings as you near your retirement age. It does this through investing a higher proportion of your savings in safer, less risky investments as you get older. This approach helps to protect you from a significant drop in the stock market just before your retirement age.
- The switching of the fund's underlying investments (i.e. the move to more cautious investments as you get older) is carried out automatically.
- There is no additional charge for investing in a Lifestyle Strategy, although charges are made by the funds in which the Lifestyle Strategy invests.
- Each lifestyle strategy is designed to access a certain form of benefit in retirement (i.e. drawdown, annuity, or cash).

The DISADVANTAGES

- A Lifestyle Strategy is based on moving into lower risk investments as you get older, such as bond and cash funds. These funds are expected to be less volatile than funds that invest in shares, for instance, but they can also suffer falls in value. In addition, the effects of inflation could mean that cash funds produce negative returns in real terms.
- By moving out of funds that invest in equities as you get older, you could potentially miss out on higher levels of growth. Shares have historically delivered higher returns than cash or bonds over the long term.
- The form of retirement benefit that the lifestyle is designed to access may not be suitable for your retirement needs.
- All the investment decisions are taken out of your hands. If you want to be more involved in planning for your retirement, a Lifestyle Strategy is probably not for you. It is an automated strategy that does not react to market conditions.

The CS Drawdown Lifestyle Strategy (the default)

The CS Drawdown Lifestyle Strategy aims to provide you with an investment portfolio at retirement that will be appropriate if you plan to take advantage of drawdown (also known as flexi-access) in retirement. Drawdown means keeping your pension account invested during retirement and drawing an income (or ad hoc cash amounts), which can be varied in terms of both frequency and amount to suit your needs.

Your account is invested in the CS Global ESG Aware Equity Fund up until you are ten years from your retirement date. Then, your investments are gradually moved into the CS Passive Multi Asset Fund and the CS BlackRock Money Market Fund as illustrated in the chart below. At retirement, 75% of your pension account will be invested in the CS Passive Multi Asset Fund and the remaining 25% of your pension account will be invested in the CS BlackRock Money Market Fund.

The CS Drawdown Lifestyle Strategy is made up of 3 funds:

Funds

- CS Global ESG Aware Equity Fund
- CS Passive Multi Asset Fund
- CS BlackRock Money Market Fund

The CS Annuity Lifestyle Strategy

We recognise that some members may still wish to purchase a guaranteed income for life (an annuity) at retirement. The CS Annuity Lifestyle Strategy aims to provide you with an investment portfolio at retirement that will be appropriate if you plan to purchase an annuity at retirement from an insurance company.

Your account is invested in the CS Global ESG Aware Equity Fund up until you are ten years from your retirement date. At retirement, 75% of your pension account will remain invested in the CS BlackRock Over 15 Years Gilts Index Fund, which offers a broad match for annuity prices. The remaining 25% of your pension account will be invested in the CS BlackRock Money Market Fund reflecting that you may choose to take 25% of your pension account as a tax-free cash lump sum.

The CS Annuity Lifestyle Strategy is made up of 3 funds:

Funds

- CS Global ESG Aware Equity Fund
- CS BlackRock Over 15 Years Gilts Index Fund
- CS BlackRock Money Market Fund

The CS Cash Lifestyle Strategy

The CS Cash Lifestyle Strategy aims to provide you with an investment portfolio at retirement that will be appropriate if you plan to take all of your pension account as cash.

Up until ten years prior to your retirement date, your account is invested in the CS Global ESG Aware Equity Fund. Then, as you get closer to retirement your account is moved into the CS Passive Multi Asset Fund and the CS BlackRock Money Market Fund as illustrated in the chart below. At retirement, 100% of your pension account will be invested in the CS BlackRock Money Market Fund.

The CS Cash Lifestyle Strategy is made up of 3 funds:

Funds

- CS Global ESG Aware Equity Fund
- CS Passive Multi Asset Fund
- CS BlackRock Money Market Fund

Let's keep it simple...

- Equities (also known as shares) represent part ownership of a company. So in terms of funds this means that an equity based fund buys company shares so it essentially becomes one of its owners. This in turn allows the fund to have a stake in its success or failure.
- Bonds are loans to a company or other large organisation, such as a local authority or government. The issuer of the bond will pay regular interest on the loan and should repay the full amount at the end of a set period.
- Cash investments include bank or building society accounts, instruments such as bank deposit certificates and cash funds provided by investment management companies.

Self-select

If you don't want to be invested using a Lifestyle Strategy and would rather take control of your own investment funds, you can do so by choosing to self-select.

How does it work?

Self-selecting your own funds is a do-it-yourself approach to investing. You can pick just one fund or several from the range available. Whatever you choose, the fund or funds should suit your needs, and that means making a choice of what levels of risk and reward are acceptable to you.

Remember, you will have to let Fidelity know when you want to change your investment choice. **Unlike the Lifestyle Strategy that de-risks automatically as retirement approaches, this does not happen when you select your own funds.**

Which funds can I self-select?

Fidelity provides a range of funds for you to choose from. Each fund is invested in one or more underlying funds managed by Fidelity or other leading fund providers. The underlying funds are usually made up of many separate investments. The company, along with their investment advisors, select the Plan's fund range from the range of funds offered by Fidelity and other carefully selected fund providers. The fund range for the Plan may change in the future.

The funds on the following pages are available to self-select in the Plan. Each fund has risk factors that are specific to the funds as well as an underlying fund objective. To understand the risks and objectives relevant to each fund listed, please refer to the appendix of this booklet and the following fund facts.

Please note that there is no limit on the number of self-select funds you can invest in; and it is possible to invest in both self-select and lifestyle, provided it is in different contribution types, as a lifestyle dictates the fund allocation of both existing and future contributions.

Fidelity Life Funds	Class	Annual Management Charge	Other Charges	Total Expense Ratio	Management Style
CS BlackRock Money Market Fund	-	0.105%	0.12%	0.225%	Active

This Life Fund invests into an underlying fund managed by one of our fund partners through a reinsurance arrangement. The Fund objective is to achieve a return (before any annual management charges) close to the rates available in the wholesale money market for short term Sterling investments.

Risk Rating: L1; Risk Factors: 16, 17

CS BlackRock Over 15 Year Gilts Index Fund	-	0.135%	0.01%	0.145%	Passive
---	---	--------	-------	--------	---------

This Life Fund invests into an underlying fund managed by one of our fund partners. The aim of the Fund is to provide a return on your investment (generated through an increase in the value of the assets held by the Fund and/or income received from those assets) by tracking closely the performance of the FTSE Actuaries UK Conventional Gilts Over 15 Years Index (the 'Benchmark Index'). Although the Fund aims to achieve its investment objective, there is no guarantee that this will be achieved. The Fund's capital is at risk meaning that the Fund could suffer a decrease in value and the value of your investment would decrease as a result.

Risk Rating: L2; Risk Factors: 2, 3, 6, 16, 17

CS iShares Over 5 Year I-L-Gilt Fund	-	0.135%	0.01%	0.145%	Passive
---	---	--------	-------	--------	---------

This Life Fund invests into an underlying fund managed by one of our fund partners. The aim of the Fund is to provide a return on your investment (generated through an increase in the value of the assets held by the Fund and/or income received from those assets) by tracking closely the performance of the FTSE Actuaries UK Index Linked Gilts Over 5 Years Index (the 'Benchmark Index'). Although the Fund aims to achieve its investment objective, there is no guarantee that this will be achieved. The Fund's capital is at risk meaning that the Fund could suffer a decrease in value and the value of your investment would decrease as a result.

Risk Rating: L2; Risk Factors: 2, 3, 6, 16, 17

CS Fidelity Corporate Bond Fund	-	0.32%	0.08%	0.4%	Active
--	---	-------	-------	------	--------

This Life Fund invests into an underlying fund managed by one of our fund partners. The Fund aims to deliver an income with the potential to increase the value of your investment. The Fund will be at least 70% exposed to sterling-denominated (or hedged back to sterling) investment grade debt instruments. The Fund is actively managed. The Investment Manager identifies suitable investment opportunities for the Fund, utilising in-house research and investment capability. The Investment Manager will, when selecting investments for the Fund and for the purposes of monitoring risk, consider the ICE BofA Euro-Sterling Index. However, the Investment Manager has a wide degree of freedom relative to the index and may invest in issuers, sectors, countries and security types not included in the index in order to take advantage of investment opportunities. This means the Fund's investments and therefore performance may vary significantly from the index. The Fund may also obtain exposure to transferable securities, money market instruments, collective investment schemes, cash and near cash and deposits. Derivatives may be used for efficient portfolio management and investment purposes and may include (but are not limited to) derivatives on exchange rates, interest rates, inflation and credit. The Fund may also take positions which enable it to benefit from falling asset prices.

Risk Rating: M1; Risk Factors: 2, 3, 17

Fidelity Life Funds	Class	Annual Management Charge	Other Charges	Total Expense Ratio	Management Style
CS L&G Overseas Bond Index Fund	-	0.255%	0.005%	0.26%	Passive

This life fund invests in an underlying fund managed by Legal & General Assurance (Pensions Management) Ltd. The objective of the underlying fund is:

The fund aims to track the total return of the JPMorgan Global Government (ex-UK) Traded Bond Index to within +/- 0.5% p.a. for two years in three. The Fidelity fund invests in the underlying fund through a reinsurance policy with Legal & General Assurance (Pensions Management) Ltd.

Risk Rating: M1; Risk Factors: 3, 6, 17

CS Threadneedle Pooled Property Fund	-	0.905%	0.07%	0.975%	Active
---	---	--------	-------	--------	--------

This Life Fund invests into an underlying fund managed by one of our fund partners through a reinsurance arrangement. The investment objective of the underlying fund is to invest primarily in direct UK commercial property. It aims to generate total returns (from income and capital appreciation) and outperform its benchmark, over rolling 3-year periods, after the deduction of charges. It also aims to deliver positive environmental or social outcomes in accordance with the Real Estate Responsible Investment Policy Statement.

Risk Rating: M1; Risk Factors: 3, 11, 13, 14

CS BlackRock European Equity Index Fund	-	0.155%	0.01%	0.165%	Passive
--	---	--------	-------	--------	---------

This Life Fund invests into an underlying fund managed by one of our fund partners. The aim of the Fund is to provide a return on your investment (generated through an increase in the value of the assets held by the Fund and/or income received from those assets) by tracking closely the performance of the FTSE Custom Developed Europe ex UK ESG Screened Index (the "Benchmark Index"). Although the Fund aims to achieve its investment objective, there is no guarantee that this will be achieved. The Fund's capital is at risk meaning that the Fund could suffer a decrease in value and the value of your investment would decrease as a result. In seeking to achieve its investment objective, the Fund will invest directly into the equities (i.e. shares) of companies in the Benchmark Index and at times invest indirectly via other equity-related investments (i.e. other investments whose value is related to equities) giving exposure to such companies. The Fund may also invest in other asset classes to seek to achieve its investment objective and/or for liquidity purposes. These other asset classes include money-market instruments (i.e. debt securities with short-term maturities), deposits (i.e. cash), and units in collective investment schemes (i.e. other investment funds which may be Associated Funds) or other assets that can be turned into cash quickly. Derivatives (i.e. investments the prices of which are based on one or more underlying assets) may be used to further the Fund's investment objective. Derivatives may also be used to seek to reduce risk (relevant to the investment objective) within the Fund, reduce investment costs and generate additional income for the Fund (often referred to as "efficient portfolio management" or "EPM"). The ESG criteria, which are applied by the index provider, may not apply to investments held by the Fund for EPM and liquidity purposes which are not included in the Benchmark Index (including derivatives, money market instruments, deposits and units in collective investment schemes). However, exposure to such assets will not exceed 20% of the Fund's total assets.

Risk Rating: M2; Risk Factors: 2, 3, 6, 16, 17

Fidelity Life Funds	Class	Annual Management Charge	Other Charges	Total Expense Ratio	Management Style
CS BlackRock Global 50/50 Index Fund	-	0.13%	0.01%	0.14%	Passive

This Life Fund invests into an underlying fund managed by one of our fund partners. The aim of the Fund is to provide a return on your investment (generated through an increase to the value of the assets held by the Fund and/or income received from those assets) by tracking closely the performance of the FTSE Custom Composite UK All-Share 50% Dev Europe ex UK 16.7% US 16.7% Japan 8.3% Dev Asia Pacific ex Japan 8.3% Midday (12:00 UK) Net Tax (UK Pension) Index ('Index'). Although the Fund aims to achieve its investment objective, there is no guarantee that this will be achieved. The Fund's capital is at risk meaning that the Fund could suffer a decrease in value and the value of your investment would decrease as a result.

Risk Rating: M2; Risk Factors: 2, 3, 6, 16, 17

CS BlackRock Japanese Equity Index Fund	-	0.155%	0.01%	0.165%	Passive
--	---	--------	-------	--------	---------

This Life Fund invests into an underlying fund managed by one of our fund partners. The aim of the Fund is to provide a return on your investment (generated through an increase in the value of the assets held by the Fund and/or income received from those assets) by tracking closely the performance of the FTSE Custom Japan ESG Screened Index (the "Benchmark Index"). Although the Fund aims to achieve its investment objective, there is no guarantee that this will be achieved. The Fund's capital is at risk meaning that the Fund could suffer a decrease in value and the value of your investment would decrease as a result. In seeking to achieve its investment objective, the Fund will invest directly into the equities (i.e. shares) of companies in the Benchmark Index and at times invest indirectly via other equity-related investments (i.e. other investments whose value is related to equities) giving exposure to such companies. The Fund may also invest in other asset classes to seek to achieve its investment objective and/or for liquidity purposes. These other asset classes include money-market instruments (i.e. debt securities with short-term maturities), deposits (i.e. cash), and units in collective investment schemes (i.e. other investment funds which may be Associated Funds) or other assets that can be turned into cash quickly. Derivatives (i.e. investments the prices of which are based on one or more underlying assets) may be used to further the Fund's investment objective. Derivatives may also be used to seek to reduce risk (relevant to the investment objective) within the Fund, reduce investment costs and generate additional income for the Fund (often referred to as "efficient portfolio management" or "EPM"). The ESG criteria, which are applied by the index provider, may not apply to investments held by the Fund for EPM and liquidity purposes which are not included in the Benchmark Index (including derivatives, money market instruments, deposits and units in collective investment schemes). However, exposure to such assets will not exceed 20% of the Fund's total assets.

Risk Rating: M2; Risk Factors: 2, 3, 6, 16, 17

CS BlackRock Pacific Rim Equity Index Fund	-	0.155%	0.01%	0.165%	Passive
---	---	--------	-------	--------	---------

This Life Fund invests into an underlying fund managed by one of our fund partners through a reinsurance arrangement. This fund invests in the shares of companies in the Pacific Rim and aims to achieve a return that is consistent with the return of the FTSE All-World Developed Asia Pacific ex-Japan Index. This index is widely regarded as the benchmark for UK pension fund investment in shares of companies in the Pacific Rim.

Risk Rating: M2; Risk Factors: 3, 6

Fidelity Life Funds	Class	Annual Management Charge	Other Charges	Total Expense Ratio	Management Style
CS BlackRock UK Equity Index Fund	-	0.135%	0.01%	0.145%	Passive

This Life Fund invests into an underlying fund managed by one of our fund partners. The aim of the Fund is to provide a return on your investment (generated through an increase in the overall value of the assets held by the Fund and/or income received from assets held by the Fund) by tracking closely the performance of the FTSE Custom All-Share ESG Screened Index (the "Benchmark Index"). Although the Fund aims to achieve its investment objective, there is no guarantee that this will be achieved. The Fund's capital is at risk meaning that the Fund could suffer a decrease in value and the value of your investment would decrease as a result. In seeking to achieve its investment objective, the Fund will invest directly into the equities (i.e. shares) of companies in the Benchmark Index and at times invest indirectly via other equity-related investments (i.e. other investments whose value is related to equities) giving exposure to such companies. The Fund may also invest in other asset classes to seek to achieve its investment objective and/or for liquidity purposes. These other asset classes include money-market instruments (i.e. debt securities with short-term maturities), deposits (i.e. cash), and units in collective investment schemes (i.e. other investment funds which may be Associated Funds) or other assets that can be turned into cash quickly. Derivatives (i.e. investments the prices of which are based on one or more underlying assets) may be used to further the Fund's investment objective. Derivatives may also be used to seek to reduce risk (relevant to the investment objective) within the Fund, reduce investment costs and generate additional income for the Fund (often referred to as "efficient portfolio management" or "EPM"). The ESG criteria, which are applied by the index provider, may not apply to investments held by the Fund for EPM and liquidity purposes which are not included in the Benchmark Index (including derivatives, money market instruments, deposits and units in collective investment schemes). However, exposure to such assets will not exceed 20% of the Fund's total assets.

Risk Rating: M2; Risk Factors: 2, 3, 6, 16, 17

CS BlackRock US Equity Index Fund	-	0.155%	0.01%	0.165%	Passive
--	---	--------	-------	--------	---------

This Life Fund invests into an underlying fund managed by one of our fund partners. The aim of the Fund is to provide a return on your investment (generated through an increase in the value of the assets held by the Fund) by tracking closely the performance of the FTSE Custom USA ESG Screened Index (the "Benchmark Index"). Although the Fund aims to achieve its investment objective, there is no guarantee that this will be achieved. The Fund's capital is at risk meaning that the Fund could suffer a decrease in value and the value of your investment would decrease as a result. In seeking to achieve its investment objective, the Fund will invest directly into the equities (i.e. shares) of companies in the Benchmark Index and at times invest indirectly via other equity-related investments (i.e. other investments whose value is related to equities) giving exposure to such companies. The Fund may also invest in other asset classes to seek to achieve its investment objective and/or for liquidity purposes. These other asset classes include money-market instruments (i.e. debt securities with short-term maturities), deposits (i.e. cash), and units in collective investment schemes (i.e. other investment funds which may be Associated Funds) or other assets that can be turned into cash quickly. Derivatives (i.e. investments the prices of which are based on one or more underlying assets) may be used to seek to reduce risk (relevant to the investment objective) within the Fund, reduce investment costs and generate additional income for the Fund (often referred to as "efficient portfolio management" or "EPM"). The ESG criteria, which are applied by the index provider, may not apply to investments held by the Fund for EPM and liquidity purposes which are not included in the Benchmark Index (including derivatives, money market instruments, deposits and units in collective investment schemes). However, exposure to such assets will not exceed 20% of the Fund's total assets.

Risk Rating: M2; Risk Factors: 2, 3, 6, 16, 17

Fidelity Life Funds	Class	Annual Management Charge	Other Charges	Total Expense Ratio	Management Style
CS Global ESG Aware Equity Fund	-	0.165%	0.026%	0.191%	Passive

The fund invests primarily in equities, both in the UK and overseas markets (which may include emerging markets). The fund can invest in one or more equity funds. The fund aims to invest in companies who meet certain environmental, social and/or governance (ESG) criteria. At any given time, there may be more emphasis placed on one or more of the factors within ESG than the others.

Risk Rating: M2; Risk Factors: 2, 3, 4, 6, 11, 14, 15, 16

CS Global ESG Focussed Equity Fund	-	0.56%	0.03%	0.59%	Active
---	---	-------	-------	-------	--------

The fund invests primarily in equities, both in the UK and overseas markets (which may include emerging markets). The fund can invest in one or more equity funds. The fund will also explicitly take into account environmental, social and governance (ESG) factors.

Risk Rating: M2; Risk Factors: 1, 3, 4, 18

CS Global Equity Fund	-	0.165%	0.017%	0.182%	Passive
------------------------------	---	--------	--------	--------	---------

The fund invests primarily in equities, both in the UK and overseas market (which may include emerging markets). The fund can invest in one or more equity funds.

Risk Rating: M2; Risk Factors: 2, 3, 4, 6, 11, 14, 15, 16, 17

CS HSBC Islamic Fund	-	0.205%	0.18%	0.385%	Passive
-----------------------------	---	--------	-------	--------	---------

This fund may invest in or reinsure into underlying funds managed by Fidelity or our Fund Partners.

Risk Rating: M2; Risk Factors: 2, 3, 4, 6, 10, 13, 14, 15, 16

CS L&G World Emerging Markets Index Fund	-	0.5%	0.005%	0.505%	Passive
---	---	------	--------	--------	---------

This Life Fund invests into an underlying fund managed by one of our fund partners through a reinsurance arrangement. The investment objective is to track the performance of the FTSE Emerging Index (less withholding tax where applicable) to within +/- 1.5% p.a. for two years out of three.

Risk Rating: H; Risk Factors: 3, 4, 5, 6

Please note that the CS L&G Ethical UK Equity Index Fund closed to new members on 14 March 2022. Members who were already invested in the fund prior to 14 March 2022 can remain invested and continue to contribute into the fund. If you make a 'change of investment' i.e., if you decrease your allocation within the fund, you will not be able to increase your allocation in the future. If you disinvest from the fund altogether, you will not be able to re-invest in it.

Charges

There are charges associated with each fund and these differ depending on the type of investment and the objective of the fund.

Funds have annual management charges (AMC) and other charges. Other charges refer to fund expenses such as auditing and registry fees. Together the annual management charge and other charges are expressed as the total expense ratio.

These charges are not taken directly from your account but deducted from each fund's assets. This is achieved by building this charge into the quoted unit price for each fund and because there are no initial charges for investing in the funds, if you contribute £100 to your pension account then £100 is invested to buy you units in your chosen fund(s). Fund charges are reviewed regularly and are detailed on the fund factsheets on Planviewer. There are no charges for switching funds or withdrawing your investments.

Monitoring your investments

It is important to review and monitor your investment fund choices on a regular basis. This is important whether you invest in the Plan's default option, or select your own funds, because investment goals may change, particularly as you get closer to retirement. PlanViewer gives you an easy way to monitor your investments. You can see how your current investment choice is performing and download the latest fund factsheets for each of the funds available to you. You can switch between investment options at any time, and you can change your selected retirement age whenever you like.

You can switch funds as often as you wish. Remember that making fund changes may result in you being out of the market for a short time and any market movements during this time may affect the value of your investments.

Active trading

Fidelity reserves the right to limit the number or frequency of times you switch. Fidelity may do this, for example, if short-term or excessive trading could harm fund performance by disrupting portfolio management strategies and increasing the expenses that the fund has to pay. Active trading is discouraged, these are switches of units held in a fund for less than 30 days. Active trades will be investigated as they are considered detrimental to other investors. An active trade will result in the individual receiving a letter explaining Fidelity's Dealing Policy and requesting that no further active trades are undertaken. If further active trades are made, measures will be taken to discourage the practice, such as applying trading restrictions on the pension account. This policy will apply at all times, regardless of market volatility.

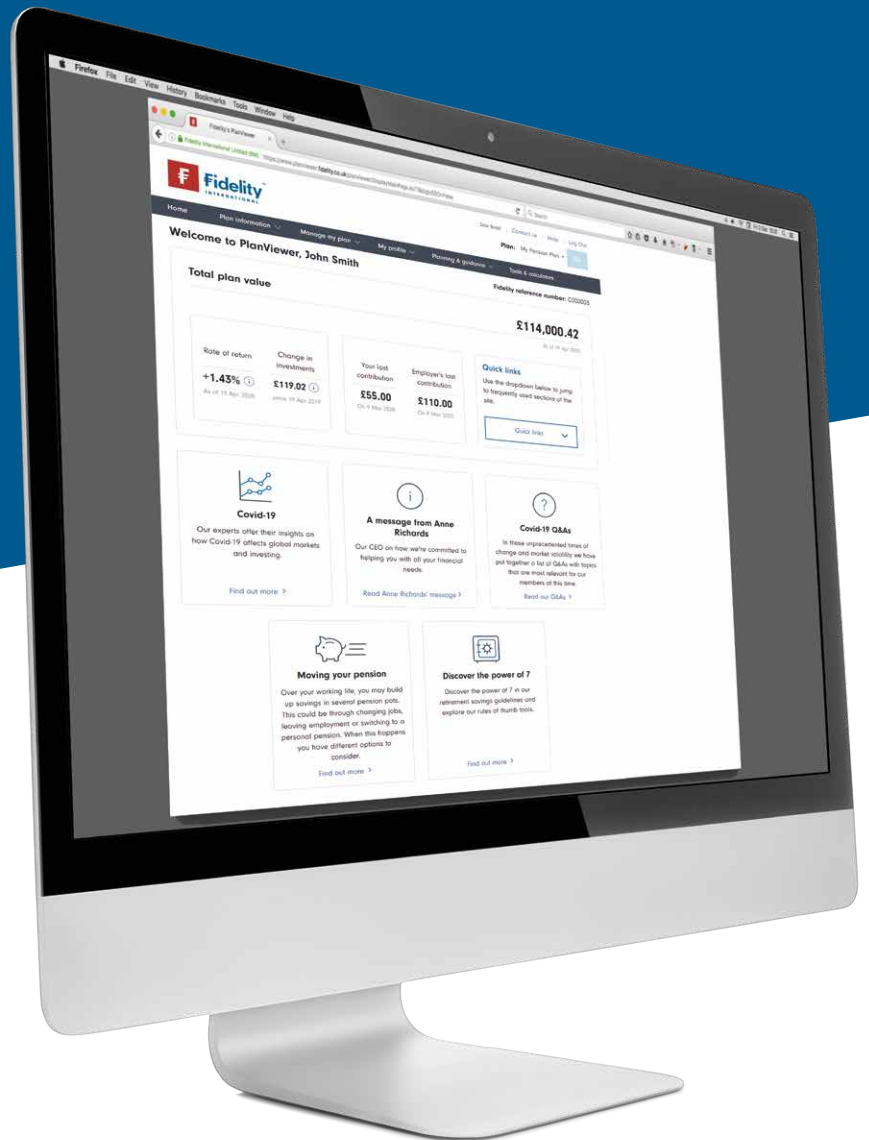

Something to note...

Companies that provide pensions are required to have certain arrangements in place to protect your money. There are a number of protections in place and should you need further information please visit [fidelity.co.uk/how-safe-is-my-plan](https://www.fidelity.co.uk/how-safe-is-my-plan)

Fidelity monitors the underlying fund providers and their funds with the aim of safeguarding your savings. The circumstances in which you will not receive the full value of your savings are, in Fidelity's opinion, very unlikely. You bear the risk in the event of the default on the part of any service provider, including any companies in the same group of companies as Fidelity, becomes insolvent or cannot otherwise pay the full amount due. If one of the underlying fund managers becomes insolvent or cannot otherwise pay the full amount due, Fidelity would seek to recover any shortfall but your savings may fall in value if Fidelity is unable to recover the full amount.

Fidelity employs a robust governance framework to protect members' assets and carries out regular checks on the financial standing of its counterparties.

Introducing PlanViewer

Fidelity's online account management service

PlanViewer is Fidelity's online account management service. It makes monitoring and managing your pension account simple. Using PlanViewer you can:

- Find out the value of your account.
- Generate an account statement for any period of membership.
- Initiate transfers from your other pension accounts where your scheme allows this.
- Review the way your account is invested.
- Access fund information and performance.
- Choose a different investment option, or change fund(s).
- Update your beneficiaries online.
- Change your selected retirement age.
- Access the latest market news.

How to get in touch

Fidelity

Fidelity administers the Plan on behalf of the Trustees.

Web

Go to planviewer.co.uk and log into your account using your username and password. PlanViewer gives you an easy way to manage your pension account. View your current account balance, review and change your funds, download information, add beneficiary details, print statements and use planning tools.

Lower Kingswood, Tadworth, Surrey, KT20 6RP.

Telephone

0800 3 68 68 68

Lines are open Monday to Friday, 8:30am to 5:30pm (UK time).

Fidelity's representatives will be happy to answer questions you may have about the Plan and its fund options but, for regulatory reasons, are unable to provide you with financial advice.

Fund specific risk factors

In addition to general risks highlighted in the 'What are the risks of investing?' section, each fund will have its own fund specific risks. The types of risks that are associated with each fund are detailed in the 'Your Plan's investment choices' section. A description of each of these risks can be found in the table below. You should refer back to this table when reviewing your fund choices.

Risk factor	Description of risk
1	<p>Concentrated portfolio</p> <p>The fund may invest in a relatively smaller number of stocks. This stock concentration may carry more risk than funds spread across a larger number of companies.</p>
2	<p>Derivative exposure</p> <p>The fund invests in derivatives as part of its investment strategy, over and above their use for efficient portfolio management. Investors should be aware that the use of these instruments can, under certain circumstances, increase the volatility and risk profile of the fund beyond that expected of a fund that only invests in equities. The fund may also be exposed to the risk that the company issuing the derivative may not honour their obligations which in turn could lead to losses arising.</p>
3	<p>Efficient portfolio management</p> <p>The fund may use other investment instruments apart from/or in place of the actual underlying securities. This is done in order to manage the fund in a more efficient fashion. Examples of these other instruments could be options, derivatives or warrants. The process of using these instruments in the fund is referred to as efficient portfolio management. These instruments can be used to effectively take a position (or reduce an existing position) in a share or index, allowing positions to be altered more quickly and cost effectively than dealing directly in the underlying investment, but are not generally used to try and magnify returns. However, investors should be aware that the use of these instruments can, under certain circumstances, increase volatility and risk beyond that expected of a fund that only invests in conventional equities.</p>
4	<p>Emerging markets</p> <p>The fund invests in emerging markets. There is an increased chance of political and economic instability with less reliable custody, dealing and settlement arrangements. The market(s) can be less liquid. If a fund investing in markets is affected by currency exchange rates, the investment could either increase or decrease. These investments therefore, carry more risk.</p>
5	<p>Ethical restrictions</p> <p>The fund is unable to invest in certain sectors and companies due to the ethical criteria used to select investments for the fund.</p>
6	<p>Exchange rate</p> <p>The fund invests in securities outside the UK. The value of investments and any income from them may, therefore, decrease or increase as a result of changes in exchange rates between currencies.</p>
7	<p>Geared investments</p> <p>The fund focuses on geared investments. Funds which focus on geared investments such as warrants or options carry a higher degree of risk than other equity investments because of the risk of the underlying investments. It is possible that the fund may suffer sudden and large falls in value so that the short fall on cancellation, or the loss of the realisation on the investment could be very high and could even equal the amount invested, in which case you would get nothing back.</p>
8	<p>High yield bonds</p> <p>The fund invests in high yield bonds. High yield bonds carry a greater risk of default than investment grade bonds, and economic conditions and interest rate movements will have a greater effect on their price. Income levels may not be achieved and the income provided may vary.</p>

Risk factor	Description of risk
9	<p>Specialist</p> <p>The fund is specifically aimed at sophisticated investors and is particularly high risk, because it concentrates on a region that may be exposed to unusual political or economic risks. You should only invest if you are comfortable with the specific risks pertaining to the fund in question.</p>
10	<p>Income eroding capital growth</p> <p>The fund focuses on income which may reduce the prospect of capital growth. Any income generated cannot generally be withdrawn from a pension account until retirement and will be reinvested in the fund.</p>
11	<p>Liquidity</p> <p>The fund can suffer from partial or total illiquidity, which may lead to considerable price fluctuations and the inability to redeem your investment. This could affect you, for example when you are close to retirement.</p>
12	<p>Performance charges</p> <p>The fund makes charges that depend on the fund's performance.</p>
13	<p>Property funds</p> <p>The fund invests directly in physical property. Due to the illiquid nature of the underlying assets, there may be delays in completing your instructions to sell. In exceptional circumstances, the manager of the fund has the authority to stop investors from selling some or all of their holdings in the fund. This could affect you, for example when you are close to retirement, as it may be difficult to sell the units you hold in such funds. Any decision to invest in physical property should be carefully considered in line with your planned retirement goals. The value of physical property is generally a matter of a valuer's opinion rather than fact. Property transaction costs are high (typically around 5% or higher due to legal costs, valuations and stamp duty) and as such you may receive a value that is lower than anticipated.</p>
14	<p>Sector specific funds</p> <p>The fund invests in specific sectors. Funds which invest in specific sectors may carry more risk than those spread across a number of different sectors. They may assume higher risk, as markets/sectors can be more volatile. In particular, gold, technology funds and other focused funds can suffer as the underlying stocks can be more volatile and less liquid.</p>
15	<p>Smaller companies</p> <p>The fund invests in smaller companies. Smaller companies' shares can be more volatile and less liquid than larger companies' shares, so smaller company funds can carry more risk.</p>
16	<p>Solvency of depositary</p> <p>The value of the fund may be affected if any of the institutions with which cash is deposited becomes insolvent or experiences other financial difficulties.</p>
17	<p>Solvency of issuers</p> <p>The fund invests in bonds and there is a risk that the issuer may default, resulting in a loss to the portfolio.</p>
18	<p>Volatility</p> <p>Investments in the fund tend to be volatile and investors should expect an above-average price increase or decrease.</p>
